

Acetyl p53 (K386) Polyclonal Antibody

Reactivity		
Reactivity Human;Rat;Mouse; Applications IHC;IF;WB;ELISA Gene Name TP53 Protein Name Cellular tumor antigen p53 Immunogen The antiserum was produced against synthesized peptide derived from human p53 around the acetylated site of Lys386. AA range:344-393 Specificity Acetyl-p53 (K386) Polyclonal Antibody detects endogenous levels of p53 protein only when acetylated at K386. Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Polyclonal, Rabbit,IgG Purification The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen. Dilution WB 1:500-2000 Immunohistochemistry: 1/100 - 1/300, Immunofluorescence: 1/200 - 1/1000. ELISA: 1/40000. Not yet tested in other applications. Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms TP53; P53; Cellular tumor antigen p53; Antigen NY-CO-13; Phosphoprotein p53; Tumor suppressor p53 Observed Band Cell Pathway Cytoplasm , Nucleus , Nucleus, PML body , Endoplasmic reticulum . Mitochondrion matrix . Cytoplasm, cytoskeleton, microtubule organizing center, centrosome . Recruited into PML bodies together with CHEK2 (PubMed:22776440) . Translocates to mitochondria upon oxidative stress (PubMed:227736440) . Translocates to mitochondria in response to mitomycin C treatment (PubMed:272732340) . [Isoform 1]: Nucleus . Cytoplasm . Predominantly nuclear but tocalizes to the cytoplasm when expressed with isoform 4; [Isoform 2] . Nucleus . Cytoplasm in some cells is: [Isoform 4]: Nucleus . Cytoplasm in some cells is: [Isoform 4]: Nucleus . Cytoplasm in some cells is: [Isoform 4]: Nucleus . Cytoplasm in some cells is: [Isoform 4]: Nucleus . Cytoplasm in some cells is: [Isoform 4]: Nucleus . Cytoplasm in some cells edited in the pucleus of the cytoplasm in some cells is: [Isoform 4]: Nucleus . 	Isoform 3 is expressed in most normal tissues but is not detected in lung, spleen, testis, fetal brain, spinal cord and fetal liver. Isoform 7 is expressed in most normal tissues but is not detected in prostate, uterus, skeletal muscle and breast. Isoform 8 is detected only in colon, bone marrow, testis, fetal brain and intestine. Isoform 9 is expressed in most normal tissues but is not detected in brain, heart, lung, fetal liver, salivary gland, breast or intestine.
Function	cofactor:Binds 1 zinc ion per subunit.,disease:Defects in TP53 are a cause of choroid plexus papilloma [MIM:260500]. Choroid plexus papilloma is a slow-growing benign tumor of the choroid plexus that often invades the leptomeninges. In children it is usually in a lateral ventricle but in adults it is more often in the fourth ventricle. Hydrocephalus is common, either from obstruction or from tumor secretion of cerebrospinal fluid. If it undergoes malignant transformation it is called a choroid plexus carcinoma. Primary choroid plexus tumors are rare and usually occur in early childhood.,disease:Defects in TP53 are a cause of Li-Fraumeni syndrome (LFS) [MIM:151623]. LFS is an autosomal dominant familial cancer syndrome that in its classic form is defined by the existence of a proband affected by a sarcoma before 45 years with a first degree relative affected by any tumor before 45 years a
Background	tumor protein p53(TP53) Homo sapiens This gene encodes a tumor suppressor protein containing transcriptional activation, DNA binding, and oligomerization domains. The encoded protein responds to diverse cellular stresses to regulate expression of target genes, thereby inducing cell cycle arrest, apoptosis, senescence, DNA repair, or changes in metabolism. Mutations in this gene are associated with a variety of human cancers, including hereditary cancers such as Li-Fraumeni syndrome. Alternative splicing of this gene and the use of alternate promoters result in multiple transcript variants and isoforms. Additional isoforms have also been shown to result from the use of alternate translation initiation codons (PMIDs: 12032546, 20937277). [provided by RefSeq, Feb 2013],
