

## 17β-HSD11 Polyclonal Antibody

| Catalog No         | BYab-02444  |
|--------------------|---|
| Isotype            | IgG   |
| Reactivity         | Human;Rat;Mouse;  |
| Applications       | WB;IF;ELISA   |
| Gene Name          | HSD17B11  |
| Protein Name       | Estradiol 17-beta-dehydrogenase 11  |
| Immunogen          | The antiserum was produced against synthesized peptide derived from human DHRS8. AA range:71-120  |
| Specificity        | 17β-HSD11 Polyclonal Antibody detects endogenous levels of 17β-HSD11 protein.   |
| Formulation        | Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.   |
| Source             | Polyclonal, Rabbit,IgG  |
| Purification       | The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.   |
| Dilution           | Western Blot: 1/500 - 1/2000. ELISA: 1/5000. IF 1:100-300 Not yet tested in other applications.   |
| Concentration      | 1 mg/ml   |
| Purity             | ≥90%  |
| Storage Stability  | -20°C/1 year  |
| Synonyms           | HSD17B11; DHRS8; PAN1B; PSEC0029; Estradiol 17-beta-dehydrogenase 11;<br>17-beta-hydroxysteroid dehydrogenase 11; 17-beta-HSD 11; 17bHSD11;<br>17betaHSD11; 17-beta-hydroxysteroid dehydrogenase XI; 17-beta-HSD XI;<br>17betaHSDXI; Cutaneous T-cell lym   |
| Observed Band      | 36kD  |
| Cell Pathway       | Endoplasmic reticulum . Lipid droplet . Redistributed from the endoplasmic reticulum to lipids droplets in the cell upon induction of lipids droplet formation  |
| Tissue Specificity | Present at high level in steroidogenic cells such as syncytiotrophoblasts,<br>sebaceous gland, Leydig cells, and granulosa cells of the dominant follicle and<br>corpus luteum. In lung, it is detected in the ciliated epithelium and in acini of adult<br>trachea, in bronchioles, but not in alveoli. In the eye, it is detected in the<br>nonpigmented epithelium of the ciliary body and, at lower level, in the inner<br>nuclear layer of the retina (at protein level). Widely expressed. Highly expressed<br>in retina, pancreas, kidney, liver, lung, adrenal, small intestine, ovary and heart. |
| Function           | catalytic activity:Estradiol-17-beta + NAD(P)(+) = estrone +  |

|                           | NAD(P)H.,function:Can convert androstan-3-alpha,17-beta-diol (3-alpha-diol) to<br>androsterone in vitro, suggesting that it may participate in androgen metabolism<br>during steroidogenesis. May act by metabolizing compounds that stimulate<br>steroid synthesis and/or by generating metabolites that inhibit it. Has no activity<br>toward DHEA (dehydroepiandrosterone), or A-dione (4-androste-3,17-dione), and<br>only a slight activity toward testosterone to A-dione. Tumor-associated antigen in<br>cutaneous T-cell lymphoma.,similarity:Belongs to the short-chain<br>dehydrogenases/reductases (SDR) family. 17-beta-HSD 3 subfamily.,tissue<br>specificity:Present at high level in steroidogenic cells such as<br>syncytiotrophoblasts, sebaceous gland, Leydig cells, and granulosa cells of the<br>dominant follicle and corpus luteum. In lung, it is detected in the ciliated ep |
|---------------------------|---|
| Background                | Short-chain alcohol dehydrogenases, such as HSD17B11, metabolize secondary alcohols and ketones (Brereton et al., 2001 [PubMed 11165019]).[supplied by OMIM, Jun 2009],   |
| matters needing attention | Avoid repeated freezing and thawing!  |
| Usage suggestions         | This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.   |
