

Cathepsin B Polyclonal Antibody

Catalog No BYab-02527 Isotype IgG Reactivity Human;Mouse;Rat Applications WB;IHC;IF;ELISA Gene Name CTSB Protein Name Cathepsin B Immunogen The antiserum was produced against synthesized peptide derived from human Cathepsin B. AA range:168-217 Specificity Cathepsin B Polyclonal Antibody detects endogenous levels of Cathepsin B protein. Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Polyclonal, Rabbit,IgG Purification The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen. Dilution WB: 1/500 - 1/2000. IHC: 1/100 - 1/300. ELISA: 1/5000 IF 1:50-200 Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms CTSB; CPSB; Cathepsin B; APP secretase; APPS; Cathepsin B1 Observed Band 38.40,25kD Cell Pathway Lysosome .Melanosome . Secreted, extracellular space . Apical cell membrane ; Peripheral membrane protein; Extracellular side . Identified by mass spectrometry in melanosome fractions from stage It o stage IV (PubMed:17081065). Localizes to the lumen of thyroid folicles and

	location:Identified by mass spectrometry in melanosome fractions from stage I to stage IV.,subunit:Dimer of a heavy chain and a light chain cross-linked by a disulfide bond.,
Background	This gene encodes a member of the C1 family of peptidases. Alternative splicing of this gene results in multiple transcript variants. At least one of these variants encodes a preproprotein that is proteolytically processed to generate multiple protein products. These products include the cathepsin B light and heavy chains, which can dimerize to form the double chain form of the enzyme. This enzyme is a lysosomal cysteine protease with both endopeptidase and exopeptidase activity that may play a role in protein turnover. It is also known as amyloid precursor protein secretase and is involved in the proteolytic processing of amyloid precursor protein (APP). Incomplete proteolytic processing of APP has been suggested to be a causative factor in Alzheimer's disease, the most common cause of dementia. Overexpression of the encoded protein has been associated with esophageal adenocarcinoma and other tumors.
matters needing attention	Avoid repeated freezing and thawing!
Usage suggestions	This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
