

## PKA IIβ reg (phospho Ser113) Polyclonal Antibody

Catalog No Isotype Reactivity Applications Gene Name Protein Name Immunogen Specificity Formulation Source Purification Dilution Dilution Concentration Purity Storage Stability Storage Stability Cobserved Band Cell Pathway Tissue Specificity	BYab-14379IgGHuman;Mouse;Rat;MonkeyWB;IHC;IF;ELISAPRKAR2BcAMP-dependent protein kinase type II-beta regulatory subunit
Reactivity Applications Gene Name Protein Name Immunogen Specificity Formulation Source Purification Dilution Concentration Purity Storage Stability Synonyms Observed Band Cell Pathway Tissue Specificity	Human;Mouse;Rat;Monkey WB;IHC;IF;ELISA PRKAR2B
ApplicationsGene NameProtein NameImmunogenSpecificityFormulationSourcePurificationDilutionConcentrationPurityStorage StabilitySynonymsObserved BandCell PathwayTissue Specificity	WB;IHC;IF;ELISA PRKAR2B
Gene Name Protein Name Immunogen Specificity Formulation Source Purification Dilution Concentration Purity Storage Stability Storage Stability Synonyms Observed Band Cell Pathway Tissue Specificity	PRKAR2B
Protein Name Immunogen Specificity Formulation Source Purification Dilution Concentration Purity Storage Stability Storage Stability Synonyms Observed Band Cell Pathway Tissue Specificity	
ImmunogenSpecificityFormulationSourcePurificationDilutionConcentrationPurityStorage StabilitySynonymsObserved BandCell PathwayTissue Specificity	cAMP-dependent protein kinase type II-beta regulatory subunit
Specificity Formulation Source Purification Dilution Concentration Purity Storage Stability Synonyms Observed Band Cell Pathway Tissue Specificity	
Formulation Source Purification Dilution Concentration Purity Storage Stability Synonyms Observed Band Cell Pathway Tissue Specificity	The antiserum was produced against synthesized peptide derived from human PKA-R2 beta around the phosphorylation site of Ser113. AA range:79-128
Source Purification Dilution Concentration Purity Storage Stability Synonyms Observed Band Cell Pathway Tissue Specificity	Phospho-PKA II $\beta$ reg (S113) Polyclonal Antibody detects endogenous levels of PKA II $\beta$ reg protein only when phosphorylated at S113.
Purification Dilution Concentration Purity Storage Stability Synonyms Observed Band Cell Pathway Tissue Specificity	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Dilution Concentration Purity Storage Stability Synonyms Observed Band Cell Pathway Tissue Specificity	Polyclonal, Rabbit,IgG
Concentration Purity Storage Stability Synonyms Observed Band Cell Pathway Tissue Specificity	The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.
Purity Storage Stability Synonyms Observed Band Cell Pathway Tissue Specificity	WB: 1/500 - 1/2000. IHC: 1/100 - 1/300. ELISA: 1/10000 IF 1:50-200
Storage Stability Synonyms Observed Band Cell Pathway Tissue Specificity	1 mg/ml
Synonyms Observed Band Cell Pathway Tissue Specificity	≥90%
Observed Band Cell Pathway Tissue Specificity	-20°C/1 year
Cell Pathway Tissue Specificity	PRKAR2B; cAMP-dependent protein kinase type II-beta regulatory subunit
Tissue Specificity	46kD
	Cytoplasm . Cell membrane . Colocalizes with PJA2 in the cytoplasm and at the cell membrane.
Function	Four types of regulatory chains are found: I-alpha, I-beta, II-alpha, and II-beta. Their expression varies among tissues and is in some cases constitutive and in others inducible.
	function:Type II regulatory chains mediate membrane association by binding to anchoring proteins, including the MAP2 kinase.,PTM:Phosphorylated by the activated catalytic chain.,similarity:Belongs to the cAMP-dependent kinase regulatory chain family.,similarity:Contains 2 cyclic nucleotide-binding domains.,subunit:The inactive form of the enzyme is composed of two regulatory chains and two catalytic chains. Activation by cAMP produces two active catalytic monomers and a regulatory dimer that binds four cAMP molecules.,tissue

Background	cAMP is a signaling molecule important for a variety of cellular functions. cAMP exerts its effects by activating the cAMP-dependent protein kinase, which transduces the signal through phosphorylation of different target proteins. The inactive kinase holoenzyme is a tetramer composed of two regulatory and two catalytic subunits. cAMP causes the dissociation of the inactive holoenzyme into a dimer of regulatory subunits bound to four cAMP and two free monomeric catalytic subunits. Four different regulatory subunits and three catalytic subunits have been identified in humans. The protein encoded by this gene is one of the regulatory subunit. This subunit can be phosphorylated by the activated catalytic subunit. This subunit has been shown to interact with and suppress the transcriptional activity of the cAMP responsive element binding protein 1 (CREB1) in activ

Immunohistochemical analysis of paraffin-embedded Human colon cancer. Antibody was diluted at 1:100(4° overnight). High-pressure and temperature Tris-EDTA,pH8.0 was used for antigen retrieval. Negetive contrl (right) obtaned from antibody was pre-absorbed by immunogen peptide.

Western blot analysis of lysates from COS7 cells treated with PMA 125ng/ml 30', using PKA-R2 beta (Phospho-Ser113) Antibody. The lane on the right is blocked with the phospho peptide.
