<b>Background</b> ribosomal protein S6 kinase B1(RPS6KB1) Homo sapiens This gene a member of the ribosomal S6 kinase family of serine/threonine kinases. encoded protein responds to mTOR (mammalian target of rapamycin) sig promote protein synthesis, cell growth, and cell proliferation. Activity of th has been associated with human cancer. Alternatively spliced transcript have been observed. The use of alternative translation start sites results isoforms with longer or shorter N-termini which may differ in their subcell localizations. There are two pseudogenes for this gene on chromosome [provided by RefSeq, Jan 2013],	The gnaling to nis gene variants in lular
