

FGF-1 Polyclonal Antibody

Catalog No	BYab-15906
lsotype	lgG
Reactivity	Human;Mouse;Rat
Applications	IHC;IF;ELISA
Gene Name	FGF1
Protein Name	Fibroblast growth factor 1
Immunogen	The antiserum was produced against synthesized peptide derived from human FGF-1. AA range:7-56
Specificity	FGF-1 Polyclonal Antibody detects endogenous levels of FGF-1 protein.
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source	Polyclonal, Rabbit,IgG
Purification	The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.
Dilution	IHC: 1/100 - 1/300. ELISA: 1/10000 IF 1:50-200
Concentration	1 mg/ml
Purity	≥90%
Storage Stability	-20°C/1 year
Synonyms	FGF1; FGFA; Fibroblast growth factor 1; FGF-1; Acidic fibroblast growth factor; aFGF; Endothelial cell growth factor; ECGF; Heparin-binding growth factor 1; HBGF-1
Observed Band	
Cell Pathway	Secreted. Cytoplasm. Cytoplasm, cell cortex. Cytoplasm, cytosol. Nucleus. Lacks a cleavable signal sequence. Within the cytoplasm, it is transported to the cell membrane and then secreted by a non-classical pathway that requires Cu(2+) ions and S100A13. Secreted in a complex with SYT1 (By similarity). Binding of exogenous FGF1 to FGFR facilitates endocytosis followed by translocation of FGF1 across endosomal membrane into the cytosol. Nuclear import from the cytosol requires the classical nuclear import machinery, involving proteins KPNA7 and KPNB1, as well as LRRC59.
Tissue Specificity	Predominantly expressed in kidney and brain. Detected at much lower levels in heart and skeletal muscle.
Function	function:The heparin-binding growth factors are angiogenic agents in vivo and are potent mitogens for a variety of cell types in vitro. There are differences in the

	tissue distribution and concentration of these 2 growth factors.,miscellaneous:This protein binds heparin, although less strongly than does bFGF.,similarity:Belongs to the heparin-binding growth factors family.,subunit:Monomer. Binds FGFR2. Forms a ternary complex containing 2 molecules each of FGFR2 and FGF1 for 1 heparin molecule. Found in a complex with FGFBP1, FGF1 and FGF2. Interacts with FGFBP1.,
Background	The protein encoded by this gene is a member of the fibroblast growth factor (FGF) family. FGF family members possess broad mitogenic and cell survival activities, and are involved in a variety of biological processes, including embryonic development, cell growth, morphogenesis, tissue repair, tumor growth and invasion. This protein functions as a modifier of endothelial cell migration and proliferation, as well as an angiogenic factor. It acts as a mitogen for a variety of mesoderm- and neuroectoderm-derived cells in vitro, thus is thought to be involved in organogenesis. Multiple alternatively spliced variants encoding different isoforms have been described. [provided by RefSeq, Jan 2009],
matters needing attention	Avoid repeated freezing and thawing!
Usage suggestions	This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
